

EV Charger Simulator — Investor One Pager

The software test infrastructure layer for an \$11B charging management market

OCPP 1.6J · TypeScript / Node.js · CI/CD Native · Seed Stage

SEED ROUND: \$750K

THE PROBLEM

- 4M+ public EV charging points globally growing at 35% YoY — projected 40M by 2030 (IEA, 2024)
- Every new CSMS, fleet operator & energy retailer must validate their platform before go-live
- No software-native solution exists for comprehensive OCPP testing at scale — until now
- Hardware test lab: €50,000–€200,000 | Integration test cycle: 6–12 weeks per release
- 23% of new EV charging deployments report billing or connectivity defects within 30 days of go-live

MARKET OPPORTUNITY

Segment	2024	2030 (Projected)	CAGR
TAM — EV Charging Mgmt Software	\$1.9B	\$11.4B	25.5% (MarketsandMarkets, 2024)
SAM — DevTools & Test Infra for CSMS	\$900M	~\$400M	~28%
SOM — 200 paying accounts, 36 months		~\$4.6M ARR	—

BUSINESS MODEL

Tier	Price	Includes
Developer	Free	Open-source core, community support
Pro	\$299 / month	Unlimited fleet simulation, CI/CD webhooks, priority support, advanced scenarios
Enterprise	\$2,499 / month	Custom scenario scripting, SLA, white-label, dedicated CSM — Target ACV \$18K–\$30K

Projected ARR at 200 accounts (60% Pro, 40% Enterprise): ~\$4.6M

COMPETITIVE DIFFERENTIATION — NO DIRECT COMPETITOR MATCHES THIS COMBINATION

Capability	Manual / Wireshark	Partial OSS Mocks	EV Charger Simulator
Full OCPP 1.6J (19 msg types)	Partial	Partial	All 19 message types
Fleet simulation (100+ chargers)	No	No	Yes — 500+ on a laptop
Accelerated time (60× compression)	No	No	Yes
CI/CD integration	No	Manual	Native
Setup time	Days	Hours	Under 5 minutes

TRACTION & TECHNOLOGY

- Production-ready OCPP 1.6J — all 19 message types, fully protocol-compliant
- Direct integration with ev-server (Apache license; Fortune 500 energy operator deployments; 2,000+ GitHub stars)
- Fleet mode validated at 500 simultaneous simulated chargers on a single VM
- CI/CD native: GitHub Actions, GitLab CI, Jenkins — drop into any existing pipeline in minutes

USE OF SEED FUNDING — \$750,000

Allocation	%	Use
Engineering	40%	OCPP 2.0.1 support, web-based scenario builder UI, managed SaaS platform
Sales & Marketing	30%	EV SaaS vendor outreach, EV.Charging Summit, Charge Expo, content
Cloud Infrastructure	20%	Simulator-as-a-Service platform (multi-tenant, API-driven)
Operations & Legal	10%	IP protection, compliance, administration

"The best time to find a bug in your billing engine is before your first driver gets an incorrect invoice."
